

Electrical Power System Design

Author: M V Deshpande **Price:** Rs 230/-

This comprehensive up-to-date book covers all aspects of the subject like fundamental concepts, such as constants of overhead transmission lines and performance of transmission lines, and discusses electrical and mechanical design of transmission lines.

Features: Emphasis has been given to problems involved in the design of EHVAC and HVDC transmission and power systems; overage on power system control and methods of line compensation.

Handbook of Electrical and electronic Insulating Materials

Author: W. Tillar Shugg **Price:** Rs 525/-

Electrical and electronic Insulating Materials are essential to the proper operation of all electrical and electronic equipments, as equipment size and operating limitations are dictated by type and amount of insulating material. As opposed to the early days of the electrical industry, today there is virtually an unlimited number of insulating materials available. So it is important to select the proper material. This handbook provides immediate access to detailed information on commonly used insulating materials.

Power System Engineering Second Edition

Author: D P Kothari, I J Nagrath **Price:** Rs 375/-

This book on Power System Engineering has been revised extensively to bring in several new topics and update the contents with the latest technological developments. All topics are supported with examples employing several bus structures.

Features: New chapter on voltage stability, underground cables, insulations for overhead lines, voltage DC transmission; Systematic exposition of basic principles involved in operation, control and analysis of modern power systems; Detailed coverage of power system transients, circuits breakers and protection.
